

Can I use my own hardware with VOIPo?

Saved From: <https://voipo.com/help/article/can-i-use-my-own-hardware-with-voipo-36.html>

You are able to use your own hardware. You can even have us provision it for you if it is a supported device i.e. RT31P2, PAP2T, or HT-502. In order for us to provision your device hardware simply login to your Reseller Control Panel and navigate as follows: Hardware -> Add Hardware. You will then be able to select the Device Type you are adding and also input the device MAC of the applicable device. Then continue to add it by hitting the submit button "Add Device". Once it is added you will then be able to manage it on your normal hardware management page.
